

Part 2: Hash Table Chaining

Project 4 - week 2

Introduce Chaining to Hash Table

List Interface

- Set.c calls functions from list.h to implement the hash table with chaining.
- getElements calls getItem + memcpy
- No Search function!
 - Already have findItem

Test Cases

`./unique /scratch/coen12/Macbeth.txt`

`./unique /scratch/coen12/Macbeth.txt /scratch/coen12/Bible.txt`

`./unique -l /scratch/coen12/Macbeth.txt /scratch/coen12/Bible.txt`

`./parity /scratch/coen12/Macbeth.txt`
